

# What are Dental Veneers and Their Types?

The custom-made tooth shells that are usually applied over the tooth surface are said to be [dental veneers](#). Covering the enamel of the worn-out tooth and help with getting the scratchy tooth aligned is the main aim of the dental veneers. With ease, they also help in covering up the cracks, spaces, and chips of the teeth.

**Veneers teeth** are good alternatives for teeth that have lost color or shape or have become crooked. They can even be used to remove the gray or yellow tinge that has got settled on the surfaces of the teeth.

In short, dental veneers are one of the utile components that are becoming interestingly used in cosmetic dentistry. They prove to be the panacea for worn enamel, chips, cracks, and unevenness that might have become visible due to wear and tear, congenital abnormal spacing of teeth.

## **What is the cost of dental veneers?**

Dental insurance does not cover the cost of treatment, since veneers are considered a cosmetic procedure. Mostly the **teeth veneers cost** depends on your dentist's location, the type chosen, and how many you get. The cost of a traditional veneer on average is anywhere between \$600 and \$2,500 per tooth. The most expensive type is the porcelain veneers.

No-prep veneers such as **Lumineers** are a little cheaper as compared to other veneers. The cost of them is anywhere between \$650 and \$2,000 per tooth. Depending on the type the cost of a dental veneer is as follows:

1. **porcelain veneers cost** ranges between \$925 to \$2,500 per tooth
2. **composite veneers cost** ranges between \$600 to \$1,500 per tooth
3. **Lumineers cost** ranges between \$800 to \$2,000
4. **Temporary veneers cost** ranges between \$470 to \$600 for both upper and lower teeth.

### **What are the different types of veneers?**

Porcelain **veneers near me** are the most common material that is used in making dental veneers. More intensive prep work is involved in applying traditional dental veneers compared to alternatives that are sometimes called “no-prep veneers”. Lumineers and Vivaneers like options are included in these no-prep veneers that take less time and are less invasive to apply.

Traditional [dental veneers near me](#) typically involve grinding down the tooth structure, sometimes removing some of the teeth even past the enamel. For proper placement this allows but it's also an irreversible process that can be painful to go through and often requires a local anesthetic.

On the other hand, no-prep veneers may require some tooth preparation or alteration, but these alterations are minimal. Instead of removing layers of the tooth under the enamel, because they only affect the enamel. No-prep veneers don't require local anesthetics in most cases.

As crowns or tooth implants veneers aren't the same. The front surface of the tooth is covered by the veneers. On the other hand, implants replace the entire tooth. While veneers only cover the front surface of the tooth, crowns also encase the entire tooth which is visible with a smile.
