

# Tips To Maintain Air Conditioner

01

## REGULAR CLEANING

Clean or replace air filters every 1-3 months. Dirty filters reduce airflow, making your AC less efficient.

02

## DUCT INSPECTION

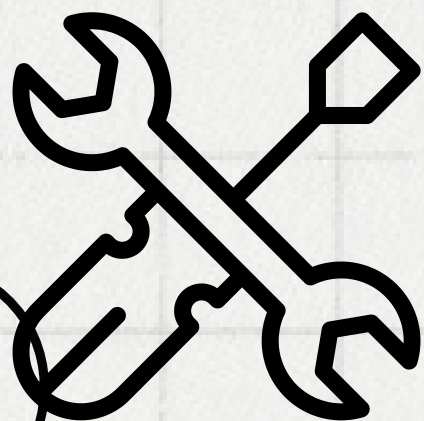

Periodically inspect your ducts by hiring and seal ducts to prevent air leakage, which can lead to energy wastage.

03

## MAINTENANCE

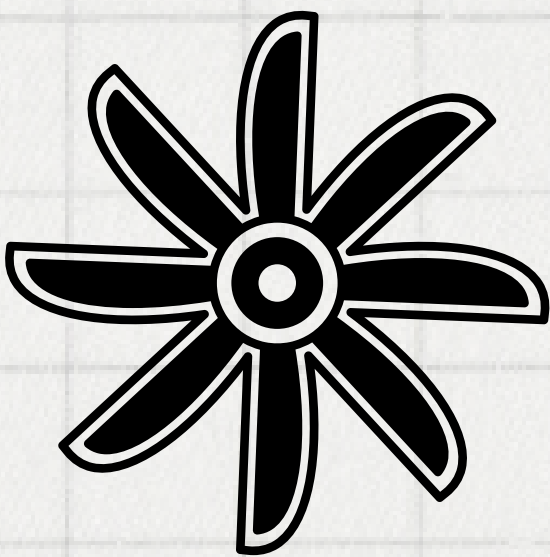

Schedule professional maintenance annually to keep your AC running smoothly, including lubricating parts and checking refrigerant levels.

04

## PROPER VENTILATION

Ensure that vents and registers are unblocked and not obstructed by furniture to maintain proper airflow

We know how crucial your AC is, which is why at Heald Mechanical, we offer the best air conditioner service in Sacramento.
