

KNOW THE FUNDAMENTALS OF WELL PUMP

The essential part of a water well pump is to draw water from the well and bring it to your house for uses like drinking, cooking, cleaning, etc. Its installation requires a team of experts to ensure appropriate and high-quality water well drilling. Submersible pumps and Jet pumps are an important part of the whole process.

● SUBMERSIBLE PUMPS:

Submersible pumps are situated deep inside the well, frequently close to the bottom, they work effectively in deeper wells. Here is a sneak preview of how they operate:

- Protection from the Elements
- Direct Pumping:

● JET PUMPS:

Jet pumps create suction to pull water from a well that is mounted below ground. It draws water from the well and provides a constant water supply. Here's a blurb of its functioning:

- Two Pipes:
- Suction:
- Pressurizing:
