

Deforestation

One of the biggest environmental problems in the world is the deforestation.

The deforestation has for principal cause ; logging for agriculture, forest fire, urbanization and shifting cultivation.

It has for consequences the destruction of approximately 15,3 billion of trees every year, that provokes the destruction of natural habitat and century old-trees.

For reduce the deforestation, it could to plant approximately 1200 trillion of trees so 250 trees by inhabitant, it would allow to limit the global warming of 1,5°C and absorb 200 giga tonnes of CO₂.

We will can stop to the consumption and production of oil palm, it will can limit grandely the Forest destruction.

For that, it should do an action who sensibilise the population at the deforestation.

Get an awareness campaign of reforestation for collect money for an association, and the money collect will be use for plant trees or manifest in the places the most touched like Amazoni.
