

The Overfishing

Today, we can see a biggest problem the overfishing in the world

Over fishing is caused by people because they are more and more in the planet and we consume 90.3 millions of tonnes fish every years. If we fishing endangered species they disappear.

They consequences for over fishing are upheaval of ecosystem and carnivorous don't have a fish for eat and they create disturbance of chain foodstuffs.

They can reduce your consummation of fish eating in 1 year and you can maybe create a safe zone for endangered species fish and change amenities for fish

I write this article to create a media campaign to recolte cash for fish. 1\$ can save fish
