PLASTIC POLLUTION

The plastic pollution is a big problem, this problem is getting worse every year. There are 400 tons of waste every day.

More than one million bird die each year from plastic waste, the plastic pollution is in the sea, it'dangerous for the fish. It is dangerous for our planet for all, and all species of our planet. We must react now because it is one of biggest problems in the world.

Everybody can reduce plastic for exemple, we can pick up waste.

After in the market he have to stop givig or sell plastic bag. We should make cleaninig associations in each city and clean every month, I propose to unite and did little groupes for pick up waste.
