

CATS OVERCROWING'S ISSUES

Today, we want to awareness people to the **cats overcrowding** because if it continue to increase, that will be an **environnemental issue**.

The cats overcrowding **doesn't stop** because, in a first part, some people don't neutring their cats. Secondly, the cats breed **four times** per year and they can give birth to 16 to 27 kittens on one year. Then, the kittens can breed at 6 month old, it is very young and fast.

On account of the cats overcrowding, **many birds species** are **dissappearing**, since the cats eat it. Some cats give diseases to other cats like **FELV, FIV, coryza** and so on and so forth and that could be **mortal**.

As a consequence, to reduce the impact of the cats crowding, we aught to **sterilize our cats**, we should **adopt** some cats in **refuge** instead of buy it in pet breeding shop.

We want to take action in creating a **TV awreness reporting** to proove the cats overding's consequence and it solutions in 50 years. You will see the reporting in 11 March 2023.
