

Sea level rising

This cause is about sea level rising, there are 2 causes which is about ice melting, a sinking land like lands that are under 0 meter of sea level that caused sinking is in Aral Sea in Kazakhstan and Uzbekistan in Central Asia.

The example of ice melting is in Greenland which is about a ice sheet which had melted. In the future, if the sea level is rising then some capitals and big cities may will flood are Paris, London, Beijing in China, etc. Also a country is in risk of sinking is Netherlands. Coastal houses can sink in sea.

The solution to avoid sea level rise is to build a dam or seawalls, reduce energy use, leave the car at home. Finally, I suggest a action which is about a dam to be built to avoid floods/sea level rising and make a petition to pressure the gouvernement to build these dam.
