Paper 1 Foundation Tier

Mark scheme

83001F June 2017

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

# **Glossary for Mark Schemes**

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

М	Method marks are awarded for a correct method which could lead to a correct answer.
Α	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
ое	Or equivalent. Accept answers that are equivalent.
	eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

# Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

# Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

#### Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

#### Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

#### Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

#### **Further work**

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

#### Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

# Work not replaced

Erased or crossed out work that is still legible should be marked.

#### Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

#### Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

# **Continental notation**

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

	<u>45</u> 250	B1B0		
	80 in (a), $\frac{8}{50}$ here	B1B0		
	$\frac{90}{400} = \frac{9}{40}$	B0B1ft		
	$\frac{500}{90} = \frac{50}{9}$	B0B1ft		
	Do not accept 18% for first mark			

Question	Answer	Mark	Comments		
	Any two of 60, 50 and 100 30	M1 A1	$\frac{60 \times 50}{100}$ 60 and 50 may be implied	by 3000	
7	Ad				
	30 with no working	M0A0			
	28.1 (from original values) and then	M0A0			

Question	Answer	Mark	Comments
	Alternative method 1		
	15 × 8 or 120	M1	
	500 – their 120 or 380	M1dep	
	their 380 ÷ 30 or 12()	M1dep	oe builds up in 30s to at least their 380 – 30 or builds up in 30s from their 120 to at least 470 allow one error in any build up method
8	their 12 × 30 or 360 or their 12 chosen from a build up	M1dep	oe their 12 must either come from rounding down their 12.() or from choosing their 12 out of a build up or because they had an exact answer of their 12 from a correct method for the third mark
	their 380 – their 360 or 20 or 500 – (their 360 + their 120) or their 360 + 8 + 8 (their correct number of 8s) or 376 or their 360 + their 120 + 8 + 8 (their correct number of 8s) or 496	M1dep	their 20 must be 0 < their 20 < 30
	17 pencils, 12 rulers	A1	

	Alternative method 2					
	15 × 0.08 or 1.2(0)	M1				
	5 – their 1.2(0) or 3.8(0)	M1dep				
	their 3.8(0) ÷ (0).3(0) or 12()		ое			
			builds up in (0).3(0)s to their 3.8(0) – 30	at least		
		M1dep	allow one error			
			or builds up in (0).3(0)s at least 4.7(0)	from their 1.2(0) to		
			allow one error			
	their 12 × 0.3(0) or 3.6(0)		dep on previous mark			
8 cont	or their 12 chosen from a build up	M1dep	their 12 must either cor down their 12.() or fro out of a build up or bec exact answer of their 12 method for the third ma	om choosing their 12 ause they had an 2 from a correct		
• • • • • • • • • • • • • • • • • • • •	their 3.8(0) – their 3.6(0) or (0).2(0)					
	or 5 – (their 3.6(0) + their 1.2(0))	M1dep				
	or their 3.6(0) + (0).08 + (0).08 (their correct number of (0).08s) or 3.76		their 0.20 must be 0 < their 0.20 < 0.30			
	or their 3.6(0) + their 1.2(0) + (0).08 + (0).08 (their correct number of (0).08s) or 4.96					
	17 pencils, 12 rulers	A1				
	Additional Guidance					
	Do not allow mixed units in working u	overed				
	For build-up, one arithmetic mistake of more than one value may be affected					
	eg, 30, 60, 90, 130, 160, 190, 220, 25 mark in alternative method 1 (error fre correctly throughout)					
	If there is no change possible, or cha are bought, it is maximum M4					
	Example 15 × 8 = 120 500 - 12	20 = 360		M1M1M1M1M0A0		
	360 ÷ 30 = 12 then 12 chosen as nun (4 <sup>th</sup> mark awarded despite no "remair change)					

Example 15 × 8 = 120 500 – 120 = 380	M1M1M1M1A0A0
$380 \div 30 = 9.2$ and 9 chosen as the number of rulers (no further work)	

Question	Answer	Mark	Comments	6
	Alternative method 1			
	2.14	B2	oe B1 answer of 2.1() ex B1 0.214 or 21.4 or 214 o	•
	Alternative method 2	I		
	Divides by 2, 2 and 3 in any order or divides by 3 and 4 in either order or divides by 2 and 6 in either order	M1	oe Attempts at all divisions mus using a valid method	st be made
	2.14	A1	ое	
9	Ad	Guidance		
	$25.68 \div 2 = 12.84$ $25.68 \div 3 = 8.56$ $25.68 \div 4 = 6.42$ $25.68 \div 6 = 4.28$			
	Use of remainders is B0 eg 25.68 ÷ 1	B0B0		
	Do not accept rounding up to 26 or 30 eg 26 ÷ 12 = 2.1666	B0B0		
	$2\frac{7}{50}$ (possibly from multiplying nume cancelling the subsequent fraction)	B2		

Question	Answer	Mark	Comment	ts			
	<u>33</u> 8	B1	or equivalent fraction				
	$4\frac{1}{8}$	B1ft	ft their improper fraction co to a mixed number	-			
			answer only of $4\frac{1}{8}$ scores	B1B1			
	Ad	ditional	Guidance				
	If their initial answer is a proper fractior mark	n they car	nnot access the second				
	eg			B0B0ft			
10	$\frac{3}{8} \times 11 = \frac{33}{88}$						
	If their ft mixed number can be simplific for the second mark	ed, the sir	nplification is not required				
	eg	B0B1ft					
	$\frac{3}{8} \times 11 = \frac{44}{8} = 5\frac{4}{8}$						
	0.375 × 11 = 4.125			B1B0			
	33 ÷ 8						
	$33 \div 8 = 4\frac{1}{8}$ B1B1						
	$\frac{11}{8} = 1\frac{3}{8}$ then $1\frac{3}{8} \times 3 = 3\frac{9}{8}$ (this gets	$\frac{11}{8} = 1\frac{3}{8} \text{ then } 1\frac{3}{8} \times 3 = 3\frac{9}{8} \text{ (this gets first B1)} = 4\frac{1}{8} \text{ B1B1}$					

Question	Answer	Mark	Comment	ts				
	Alternative method 1							
	40 ÷ 4 or 10 or 30	M1	Accept evidence on diagra	ım				
	32 – their 10 or 22	M1dep	Accept evidence on diagra	ım				
	3 × their 10 + their 22	M1dep	dep on M2					
	52	A1						
	Alternative method 2							
	40 ÷ 4 or 10 or 30	M1	Accept evidence on diagram					
11	2 × their 10 or 20	M1dep						
	32 + 40 – their 20	M1dep	dep on M2					
	52	A1						
	Additional Guidance							
	The two top sides on the triangle giver accepted as evidence of 22							
	Beware of appearance of 20 for reaso mark eg 10, 20, 30, 40	M1 earned at that point						
	Beware - wrong working can lead to the appearance of 52 (after rounding)							

	20	B1	allow <i>P</i> = 20		
12(a)	Additional Guidance				

Question	Answer	Mark	Comments		
	53 – 11 or 42 or 33 × 3 or 99 or 11 × 2 or 33 – 11 or 22	M1			
12(b)	their 42 ÷ 3 or 14 or their 99 – 53 – their 22 or (their 22 × 3) – their 42 or 24	M1dep	oe eg build up - allow one error		
	33 – 11 – their 14 or their 24 ÷ 3	M1dep	dep on M1M1		
	8	A1			
		Guidance			
	3 × 14 + 11 = 53	M2			

Question	Answer	Mark	Comment	s
	2 + 0 + 1 - 7 = -4 or 2 - 0 + 1 - 7 = -4	B1		
	$2 \times 0 \times 1 \times 7 = 0$ or $2 \times 0 \div 1 \times 7 = 0$ or $2 \times 0 \times 1 \div 7 = 0$ or	B1	Allow any brackets in pairs	s for first four
	$2 \times 0 \div 1 \div 7 = 0$ or $2 \times 0 \times (1 + 7) = 0$ or $2 \times 0 \div (1 + 7) = 0$		Allow – instead of + for las	t two
13	$(2 + 0) \times (1 + 7) = 2^4$ or $(2 - 0) \times (1 + 7) = 2^4$ or $2 \times (0 + 1 + 7)$	B1		
	Ad			
	In all cases, allow extra pairs of bracke calculation eg in 3rd calculation ((2 + 0) × (1		B1	
	Brackets can be used in the place of aeg in 2nd calculation $2 \times 0(1 + 7)$	B1		
	Each gap must have a bracket or an or			
	Allow additional + or - signs in any gap eg in 1st calculation 2 + 0 + 1 +		t	B1

Question	Answer	Mark	Comments		
	Alternative method 1				
	2x + x = 18 + 6	M1	oe Eliminates a variable Implied by $3x = n$ , where $n > 18$		
	3 <i>x</i> = 24 or <i>x</i> = 8	A1	ое		
	<i>x</i> = 8 and <i>y</i> = 2	A1			
	Alternative method 2				
	$y2y = 18 - 2 \times 6$ or $y2y = 18 - 12$ or $y + 2y = 18 - 2 \times 6$ or $y + 2y = 18 - 12$	M1	oe Eliminates a variable Implied by $2x - 2y = 12$ followed by 3y = m, where $m < 18$		
28	3y = 6  or  -3y = -6 or y = 2  or  -y = -2	A1	oe		
	<i>x</i> = 8 and <i>y</i> = 2	A1			
	Alternative method 3				
	$\frac{18 - y}{2} = y + 6$ or $18 - 2x = x - 6$	M1	oe Eliminates a variable		
	3x = 24 or x = 8 or 3y = 6 or y = 2	A1	oe Collects terms		
	<i>x</i> = 8 and <i>y</i> = 2	A1			

Alternative method 4	ative method 4			
Correctly evaluated trial of at least one pair of values in one equation for which they do not work	M1	eg 9 – 2 = 7 The pair of values must no answer	ot be given as	
Correctly evaluated trial of at least three pairs of values in one equation for which they do not work	M1dep	eg 9 - 2 = 7 $2 \times 11 + 5 = 27$ 10 - (-2) = 12 With none of the three pair as the answer	rs of values g	
x = 8 and $y = 2$	A1			
Ad	ditional	Guidance		
One correct value with one incorrect value (or no second value) and no working eg $x = 6$ and $y = 2$ eg $y = 2$			M1A1A M1A1A M1A1A	
2) or 8, 2 on answer line (with or without working)			M1A1A	
(2, 8) or 2, 8 on answer line with no wo	orking		M0A0A	
Embedded, correct values in one equation only eg $2 \times 8 + 2 = 18$ Embedded, correct values in both equations ie $2 \times 8 + 2 = 18$ and $8 - 2 = 6$ Please check crossed out work, which may indicate correct rejection of a trial in this question, as covered in alternative method 4		M1A0A M1A1A
